

Financial Operating System For Business — Finos

SUMMARY

Build a production-ready, modern, secure, multi-tenant Financial Operating System for Business (FinOS) designed initially for businesses in Papua New Guinea, but architected so it can expand internationally.

SOURCE CONTENT TYPE

Product/technical specification document rather than a personal resume.

PRODUCT VISION

FinOS — The financial operating system for your business.

TECHNOLOGY STACK

Backend: PHP 8.3+, Laravel 12+, Laravel REST API, Laravel Sanctum, Laravel Queues, Laravel Notifications, Laravel Scheduler, Laravel Events/Listeners, Laravel Policies, Laravel Form Requests, Laravel API Resources, Laravel Jobs. Frontend: Next.js, TypeScript, React, App Router, Tailwind CSS, shadcn/ui, React Hook Form, Zod, TanStack Query, Recharts, Lucide Icons. Database: PostgreSQL.

ARCHITECTURE

Next.js → Laravel REST API → Application Services → Repositories / Eloquent → PostgreSQL. Laravel as authoritative backend; all financial transactions pass through Laravel API.

IMPLEMENTATION SCOPE

Comprehensive multi-tenant financial SaaS platform including onboarding, roles/permissions, dashboard KPIs/charts, accounting engine, AR/AP, invoicing, expenses, purchases, inventory, sales, banking, reconciliation, forecasting, budgeting, project finance, payroll, tax configuration, reporting, audit logs, notifications, search, API/versioning, database design, testing, security, performance, import/export, opening balances, subscriptions, admin platform, business settings, and phased delivery.
